Abstract: Most of the works on the aspect of Hausa morphology are descriptives. Theoretical analyses are rare. For this reason, the article intended to look at some post syntactic operations during word formation in Hausa language with emphasis on affixes. These post syntactic operations include: Fusion, fission, impoverishment, morphological merger, linearization, ornamentation, syncretism, competition and blocking, allomorphy and productivity. The topics will be discussed from Distributed morphology point of view as explained in details Halle & Marantz (1993, 1994), Halle (1997), Marantz (1997), Embick (2010, 2015).
